TECHNOLOGY TIPS

northeast.edu

Northeast Service Center no longer provides checkout laptops to students.

If you need to work on a computer, several study areas are available on campus, including the library and computer labs.

If you are purchasing a laptop for school, here are some recommendations:

- Windows 11 is recommended for the operating system.
- Apple Products do work, but Northeast offers no support for Apple operating systems and they are not compatible with certain packages and programs used by the college.
- Chrome Books should not be purchased or used due to the compatibility issues with Office Products, OneDrive, and majority of packages used by the college.

Minimum laptop specifications:

- Core i5 processor
- 8GB of system memory
- 256GB hard drive for sufficient storage space
- Display of 14"
- Integrated webcam/microphone for use during Zoom Sessions

It is recommended to see your program director/instructor to ensure the proper equipment is used for the program.
